Game Guide

Sacred Gold Plus 1.3.2 - current English reference.

Guide and summary controls

Open Guide from the field menu. Choose Training, Evolutions, Special Pokemon or Items and TMs. A opens an entry or link, B returns, and L/R or Left/Right jumps five entries in lists. Returning from a link restores the previous position. The Guide contains 467 entries.

In the Pokemon summary, L shows EVs, R shows IVs and SELECT returns to ordinary stats. From the ordinary field party menu, R opens the native PC storage interface when the current context allows it.

Options and Plus settings

In Options, press SELECT for the current Game, Plus and Shiny settings. Up/Down selects a row, Left/Right changes its value, and L/R moves between sections. A opens or confirms a selector, Y opens Info, X asks to Apply, and B goes back. At the root, B lets you apply, discard or continue editing pending changes. Settings use physical buttons, not touch.

Trainer difficulty and wild level scaling are independent choices. Plus also controls battle motion, character loading and the Wi-Fi slot. Levels remain capped at 100. Native audio, text speed, battle style, controls and frame settings remain available.

Bag, camera and everyday play

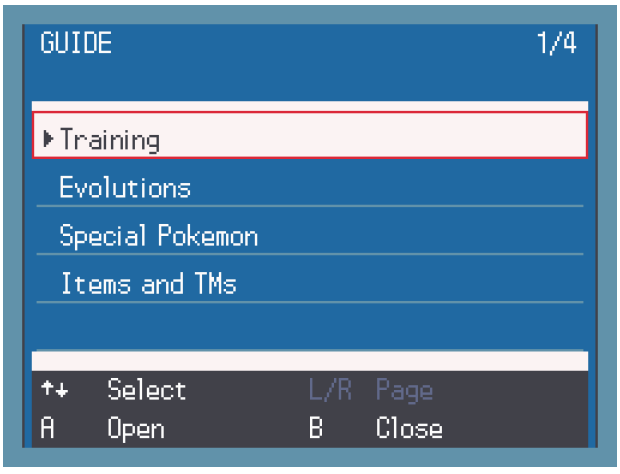

The main Bag pocket has 252 slots, with expanded capacity in other pockets. Consecutive Rare Candy use keeps the party menu open and retains normal move-learning and evolution prompts. The classic camera is used in 52 interiors and caves, while the wider Plus view remains outdoors.

Shiny profiles and Search

Classic uses 1/512 for eligible generation. Pro starts at 1/4096 for the chosen target, then improves to 1/2048 after 10 successes, 1/1024 after 20 and 1/512 after 40. The next generated encounter uses the completed threshold. Catching or defeating the target advances the chain. Another ordinary species, escape, loss or draw breaks it. No threshold guarantees a shiny.

Search chooses an already-seen species from the current area and method, respecting time, terrain, forms, owned rods and progression. It requires 40 valid steps. Prepare the hunt in settings, confirm Apply and return to a free field. A successful Search spends the charge. Changing mode or target resets chain and charge, while cancelling preserves them.

A normal SAVE retains mode, target, chain and random state. A cold restart resets the step charge. Eggs, gifts, starters, trades, Mystery Gift, roamers, trainer Pokemon, Safari, contests, doubles and forced events retain their separate native paths. Eligible ordinary statics use base odds without a chain bonus. Existing Pokemon are never rerolled.

Training

IVs and Bottle Caps

- Where: consultants in the Violet and Blackthorn Poke Marts. Choose training rules in their settings before using the service.

- Select a party Pokemon, the service and a stat if needed. Review current and proposed values, then confirm.

- These are real IV edits. Breeding and Hidden Power can change. Eggs cannot be trained. Save the game to keep changes.

EV rules and quick training

- Where: the training consultant inside the Route 34 Day Care. Quick training edits a party Pokemon.

- Classic: at most 252 EVs in each stat and 510 total. Unlimited: at most 252 in all six stats, this breaks normal balance.

- Choose a target from 0 to 252. Added EVs cost 100 each, lowering a stat or resetting all EVs is free.

- A stricter mode is refused if any owned Pokemon or active course target exceeds its limits. Existing values are never silently cut. Original rules allow older saves to lower excess values first.

Day Care courses

- First deposit one or two Pokemon with the Day Care lady. Then enroll each deposited slot with the training consultant.

- Free courses give one level every two hours, up to Lv.100. Optionally choose one EV stat and a target: it gains 32 EVs per completed hour, stopping at that target.

- Walking growth earned before enrollment is kept. Later steps still support breeding but do not add training experience.

- Courses preserve moves. Check projected progress with the consultant, withdraw normally from the Day Care to receive it.

Real time or playtime

- Real time is the default: courses follow the console or emulator clock, including time while the game is closed.

- Playtime counts only when the native game timer advances. Fast-forward can accelerate it.

- You may change the clock choice in training settings without losing progress already earned. Moving a clock backward adds no progress and starts counting from the new time.

- No penalty is applied for changing the device or emulator clock. Save after enrolling or changing settings.

Remote course status

- Call the Day Care through the Pokegear contact to check enrolled Pokemon away from the building.

- The course report shows the projected level and, for EV courses, the chosen stat's current and target values.

- Remaining time describes the whole course, including its level goal, it is not the wait until the next EV increase. Withdraw at the Day Care to apply progress.

Earn and claim Caps

- Claim earned Caps from a Poke Mart consultant. First Johto Gym victories give two Silver Caps each, Kanto Gyms give three each.

- The eighth and sixteenth Badges also give one Gold Cap each. First League victory: four Silver and two Gold, later victories: four Silver and one Gold.

- First victory over Red: three Gold Caps. Old saves can claim historical one-time milestones once, earlier repeated League clears are not paid retroactively.

- Rewards that do not fit in the Bag remain pending. Make space and return to claim them. Ordinary trainers and wild Pokemon give no Caps.

Continue an existing adventure

Keep your language, installed ROM filename and path, emulator association and raw .sav. Save in-game, close fully and back up the active save and installed ROM. Test the successor on a separate save copy through Continue, native SAVE and a cold restart. Replace only the ROM, keeping the personal save in its original place. No new game or settings reset is required.
